

# Our Greener Power Solutions

**Entertainment Services** is committed to conducting business in an environmentally responsible and conscientious manner. We utilize renewable energy sources wherever and whenever practical to reduce our carbon footprint, and we engineer safety into all of our products to reduce the risk of injury or damage to the environment. Our generator set engines are emissions-certified and meet all EPA standards. Our sound attenuated enclosures, fuel tanks and other specialized products are designed with UL-listed components according to stringent production standards to ensure safe fluid containment and reduced noise levels.

For years **Entertainment Services** has offered bio-diesel as an alternative to our clients in the entertainment industry. To limit our carbon footprint even further while still delivering dependable power, we are also developing a production technology that uses house power during pre-production, with a seamless transfer to generator power on show days.

Our environmental philosophy is in alignment with Caterpillar's market-based approach to the aggressive development of current and future clean technologies that reduce emissions and sustain the environment. In summary, we strive to conserve natural resources; reduce waste through emissions technology, recycling and the safe disposal of consumable items; and by example, we encourage our business partners and customers to do the same.
